

# End Toenail Fungus NOW!

Anyone who has toenail fungus faces an uphill battle to get rid of it because it is everywhere. You can contract it walking barefoot at the pool, in a locker room or shower stall. It can be in the carpet at a hotel room or on the floor of an airport security line.

It can be present at a nail salon if supplies and instruments are not sanitized. It can even be lurking in your home or in your shoes.

### There's no quick fix!

Everyone who has this condition wishes there was a quick fix but that's not likely to happen. Over the counter topical drugs applied directly to the nail for up to twelve months may be ineffective if they can't pass

through the nail. Oral medications taken for 6-12 weeks may be more effective but have higher risk factors.

### Advanced laser technology available!

The Cutera Genesis Plus Laser is recognized as the gold standard treatment for the removal of toenail fungus.

### A new 5-Step program that works!

#### Step 1- Diagnosis confirmed

During the initial exam we confirm if toenail fungus is present and whether the patient is a candidate for laser treatment. In some cases we send nail specimens to a laboratory for confirmation.

#### Step 2- Sanitized medical instruments

Prior to laser treatment, nails are trimmed

and sanded down to remove the infection and to reduce nail thickness. Medical grade instruments are used and properly sanitized.

#### Step 3- Best of class laser

The Cutera Genesis Plus laser is FDA cleared to treat nail fungus. Each patient is required to have a 15-20 minute laser treatment every month for three months. Treatments are quick and pain free. There is no downtime. Pain medications are not required and in most cases oral medications are not necessary. Improvement is seen in over 70-80% of the patients. Healthy nails can take 3-9 months to emerge.

#### Step 4- Innovative nail restoration treatment

KeryFlex Nail Restoration™ treatments are recommended in conjunction with laser treatments. Recognized as one of the Top Ten Innovations in Podiatry Today, this process restores the appearance of natural nails immediately following a laser treatment ending the embarrassment of ugly toenails.

#### Step 5- Added protection

We have an arsenal of toenail fungus products offered in conjunction with laser treatments to prevent reinfection from the environment. These include topical creams, prescription lacquers, disinfectant sprays and shoe sanitizers.

#### Affordable costs

Most carriers cover the cost of the consultation and some cover the cost of laser treatments. Affordable payment plans are available.

#### Zap your toenail fungus away for good!

Call the Foot & Ankle Center of Illinois/Illinois Laser at **(217)787-2700** for a consultation. Take advantage of special spring and summer pricing.
